NorCom Information Technology GmbH & Co. KGaA

Overall, the share price was down almost 1 percent month-on-month.

The TecDax benchmark index also fell by 5 percent in the comparable period.

Market capitalization at the end of the month

The current market capitalization is 14,269,144 euros (September 29, 2023). The total number of voting rights is 2,129,723 shares.

2 NorCom: Insight/Outlook

1 Development of the share price in September 2023

The share started September with a value of 6.75 euros. Compared to the prices that the share reached in the last few weeks, this is a rather weak value. It reached its monthly high of 6.80 euros on September 19th.

In September there was little movement in the share price; it often remained at one value for a few days until slight upward or downward impulses were noticeable again.

It closed September at 6.70 euros. With a few exceptions, it only moved sideways over the course of the month. There was also no significant stimulus from the market as a whole that the share could use to its advantage.

Expert LLMs in DaSense

Standardized large language models (such as GPT) have a broad general knowledge. However, they do not always provide technically correct answers to all conceivable questions.

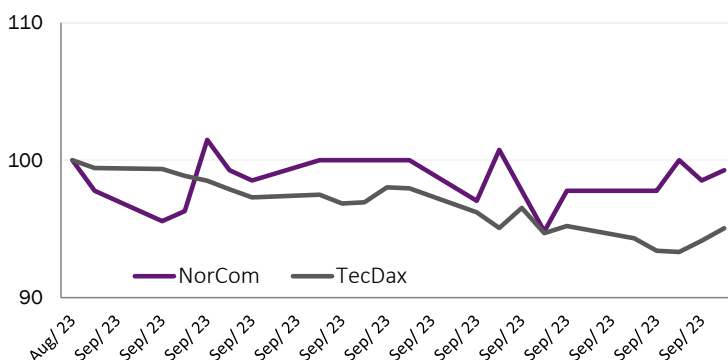

Expert LLMs have been trained in specific subject areas, such as medicine, law, finance, public administration. They have in-depth specialist knowledge and a precise understanding of complex technical terms and concepts.

Expert LLMs are a particularly promising approach when there is a complex problem that overwhelms a generalist like ChatGPT. ChatGPT relies on “world knowledge”, but cannot be further adapted to the requirements of the application.

Expertise, text generation, quality control with expert LLMs

The expert training enables subject-specific understanding, which means complex technical terminology and concepts are grasped.

Core information is extracted quickly and precisely, taking expert know-how into account. Content is created with high quality.

AI-generated output is additionally checked through facets. Facets clarify the exact origin and basis of the AI results and help to quickly identify “hallucinations”.

This verification method is unique and requires a platform like DaSense to manage company and industry data.

3 General market development

September lived up to its reputation as the seasonally worst month for the stock market. With a price loss of around 3.5 percent, the German leading index DAX recorded its biggest monthly loss in a year and was trading at 15,386 points at the end of September. The US standard value index S&P 500 even fell almost 5 percent month-on-month. Globally, most standard value indices also recorded price losses.

Since the interest rate-induced economic slowdown would also cloud the inflation prospects in the coming months, the discussion about possible key interest rate cuts in the first half of 2024 is likely to be at the top of the agenda towards the end of the year. In the current environment, in which the DAX has not even corrected 10 percent from its peak at the end of July, although the sentiment seems to be considerably more pessimistic, prices of risky assets can quickly rise again if just some of the fears turn out to be too great. With a view to the end of the year, we therefore expect falling interest rates with longer terms and rising prices for shares, precious metals and euros.

[Generative KI: Warum Small Language Models manchmal besser sind](#)

However, even the small language models can now catch up in terms of performance – if not even surpass it. Instead of feeding GenAI with the entire internet, it is trained with highly curated, structured and domain-specific data. This may limit the range of answers, but increases their reliability.
