

Monthly Report

Investor Relations | 04/23

NorCom Information Technology GmbH & Co. KGaA

The preliminary business figures further dampened the development and so the NorCom share closed the month at EUR 7.75 - after all, a good 5 percent plus.

The comparative index TecDax lost a good 5 percent in the same period.

Market capitalization at the end of the month

The current market capitalization is EUR 16,505,353 (April 28, 2023). The total number of voting rights is 2,129,723 shares.

2 NorCom: Insight/Outlook

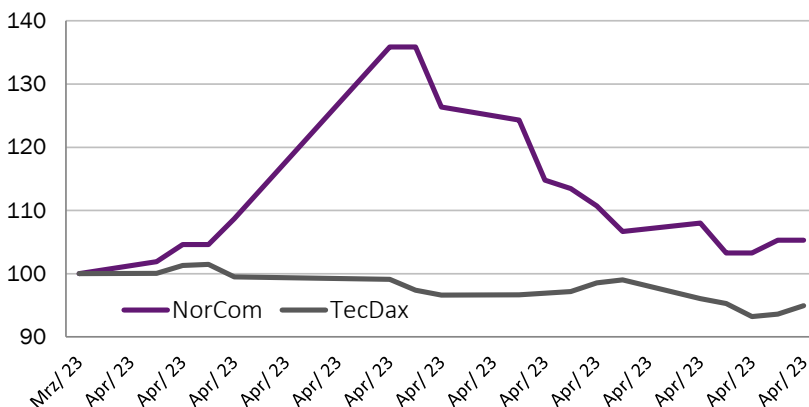

1 Development of the share price in April 2023

After the zigzag course in March, the share got off to a tranquil start in April. From the opening price of EUR 7.36, it climbed to EUR 7.70 and then EUR 8.00 in the first few days.

Over Easter, it jumped almost 30 percent and reached a price of EUR 10.00. Seen on the month even an increase of almost 36 percent.

Positive reporting in shareholder media could have been the reason for the further increase. The subject of AI has potential for the future!

It was able to hold this high of the month for another day, but then corrected downwards again.

DaSense Community Open Source at the Fujitsu Annual Conference on Digital Management

As a partner of Fujitsu, we met a high-ranking audience from the public sector at the annual conference on digital administration. As part of the trade exhibition, we showed specific use cases of AI in the public sector and presented the DaSense Community Open Source (DaSense COS) solution to more than 100 C-level visitors.

The event also offered a very good opportunity to strengthen the partnership with Fujitsu and to define concrete next steps together.

ChatGPT integrated in DaSense Apps

The NER App and the Summary App are already known. These are now additionally supported by ChatGPT.

With the new Synthetic Data App, synthetic data is generated based on legacy data - with the help of ChatGPT.

The new RegexGenerator app uses characters and patterns to find specific content in text.

3 Allgemeine Marktentwicklung

Hopes for a dynamic economic upswing later in the year were dampened by the latest forecasts by the IMF (International Monetary Fund). Global economic growth of only 2.8 percent is expected, with the group of industrialized countries clearly lagging behind the emerging countries with growth of 1.3 percent. In addition, there is a risk of even weaker momentum in the event of greater uncertainty in the financial sector.

The leading German index, the DAX, rose by almost 2 percent to 15,922 points in April. (...)

(...) Clearly positive impulses are unlikely to appear on the stock markets until at least one of these contradictions is resolved. Investors will continue to pay particular attention to the coming statements and decisions from the central banks, because the question of future monetary policy remains one of the most important influencing factors. However, the ECB, Fed & Co. are currently walking a fine line between fighting inflation and stabilizing the financial system.

In this context and in view of the existing geopolitical risks, increased fluctuations are also likely in the coming months. In the event of renewed major geopolitical or financial market uncertainties, more significant price setbacks cannot be ruled out. Therefore, precious metals and crypto assets should remain attractive for the time being.
