

MONTHLY REPORT

Investor Relations | 10/22

NorCom Information Technology GmbH & Co. KGaA

The share closed October at EUR 6.22 and lost a good 7 percent in value.

The comparative index TecDax was almost 10 percent up in the same period.

Market capitalization at the end of the month

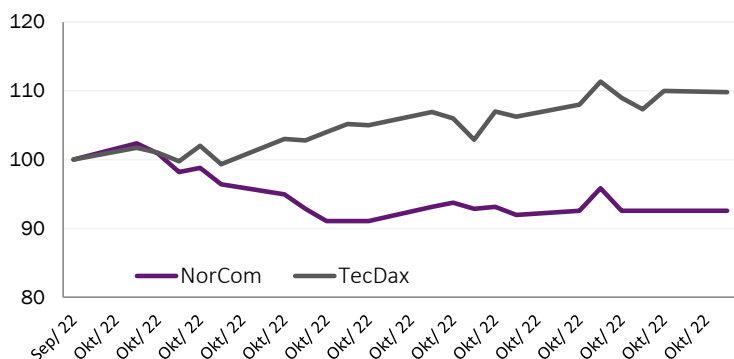

The current market capitalization is EUR 13,246,877 (October 31, 2022). The total number of voting rights is 2,129,723 shares.

2 NorCom: Insight/Outlook

1 Development of the share price in October 2022

The share opened October at a value of EUR 6.72. The chart shows that although the NorCom share tracked upward movements in the Tec-Dax, it remained at a lower level overall.

Even positive reports from the company did not manage to give the share an upward impetus. In particular from the [notification of renewed contract award and extension](#) by the Federal Agency longer-term effects on the increase in the value of the share had been expected.

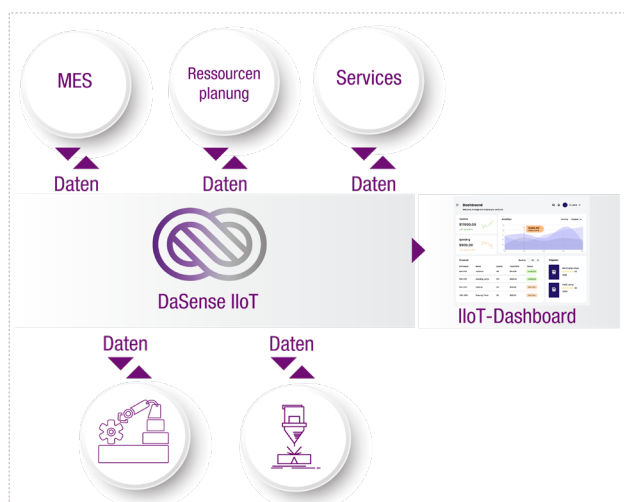

DaSense for industrial processes

With the DaSense IIoT divisional solution, NorCom offers a central AI platform for the control, monitoring and management of production processes in industrial groups.

DaSense IIoT takes over the AI control of production systems and networks all machines and sensors involved as well as the controlling software.

Incoming data is recorded, analyzed and related, thus enabling intelligent processes. DaSense IIoT automates smooth communication between the systems and monitors their performance, functionality and utilization throughout the lifecycle.

NorCom Information Technology GmbH & Co. KGaA

DaSense at authorities

NorCom also offers DaSense as a tailor-made solution for authorities.

DaSense Community is an open source solution for the implementation of the digitization desired by politics.

Authorities are very different in terms of their purpose and orientation - but almost all administrations have in common the fast, secure work with large, sometimes confidential data and document volumes.

Reading in, organizing and making data and documents available takes up a large part of the working time. DaSense Community automates these routine tasks from day one.

3 General market development

In October it became clear that expected developments in the real economy are priced in on the stock markets a few months in advance. Although many leading economic indicators are at crisis levels, the leading German index DAX was able to gain more than 9 percent. The fact that the danger of a gas shortage in the winter has decreased in view of almost completely full gas storage facilities and only a moderate increase in consumption and that there were tentative signs of a less restrictive monetary policy course by the ECB in the future may also have contributed to the relaxation.

It remains the case that investors should remain constructive, not say goodbye to the stock exchanges because of apparently excessive risks, but rather observe developments closely and work out suitable positioning for the time after the various acute crisis scenarios and already implement them in parts. (...)Therefore it can by no means be ruled out that new lows for the year will not be reached in the coming weeks, the potential risk factors are simply too significant for that. However, there are already indications that the opportunities given the current price levels outweigh the further risks.

[Was ist Data Storytelling?](#)

In order to pass as data-driven, companies today have to do much more than just conduct data analysis. Rather, it is up to business and IT decision makers to transform relevant data into compelling stories that are easy for key stakeholders to understand - and which they can use to make better business decisions.

[Vertrauen in die Datenintegrität zwischen Daten- und Analyseteams schwankt](#)

70% of business users believe the deployed data and analytics applications do not meet their current or future needs, while only 32% of core data and analytics teams agree. Findings show a clear separation between the data and analytics teams and their key stakeholders - with business users unable to rely on trusted data for confident decision-making.
